### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

Claims 1, 3 – 13, 20-22 and 25 are allowable over the prior art of record.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 31 – 32 are rejected under 35 U.S.C. 102(b) as being anticipated by Yamaguchi et al(US4631710) or Roundhill et al (US6283919) .

Yamaguchi et al axially processes ultrasound echo data along scanlines using variable bandpass filtering as a function of axial direction of these scanlines and with bandpass center frequency adapted as a function of axial depth and is therefore characterizable as an adaptive sidelobe or grating lobe suppression technique.

Roundhill et al processes ultrasound data axially along scanlines with adaptive blended data processing effected by switched or parallel digital filtering responsive to axial processing depth in order to employ harmonic echo information at least in the near field where the harmonic effectively has lower sidelobes, such that this depth-dependent blending process of Fig. 14 is fairly characterizable as an adaptive sidelobe suppression technique.
